

INFOGRAPHIC

Over the next two weeks (Weeks 15-16), you will be creating an infographic. What's an infographic, you ask?

An infographic is a visual representation of information, see examples at the end of this document. It combines text, images, illustrations, and statistical visualizations to present information in an easily accessible format for everyone. You can use Statskingdom.com to visualize statistics.

You will use the same theme, social issues, that we worked on during English class before the Easter break. You will do this task individually.

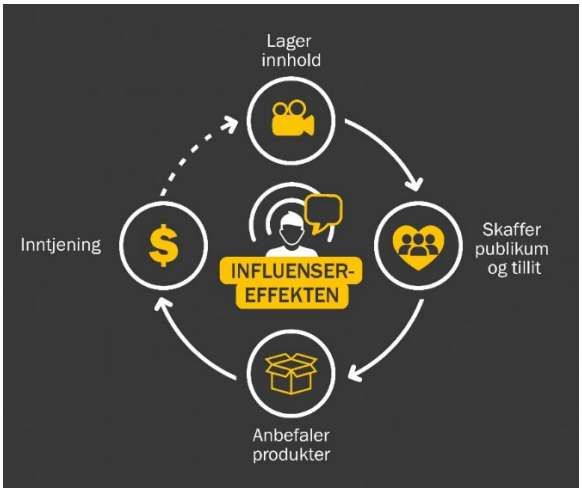

Process:

1. As infographics have limited space for text, you need to pick out only the most important parts from the theme you've already written about.
2. Create or find graphical illustrations for the paragraphs you have chosen. This can be:
    - A larger image that represents the whole theme
    - Statistics such as bar charts or pie-diagrams. You can make these yourself or use websites like Statskingdom.com to make it for you.
    - Images that illustrate what a paragraph is about. For example: if you write about families, it is natural to have a small illustration of a family (usually stick figures) next to it.
3. Use **Photoshop** or **InDesign** to integrate the text and graphics together to create a poster; an infographic. You can decide what size and dimensions fit best. Keywords are:
    - Text color, background color, typography, layout, composition, boxes, whitespace. If you want to learn more about this, you can watch this video about layout and composition.

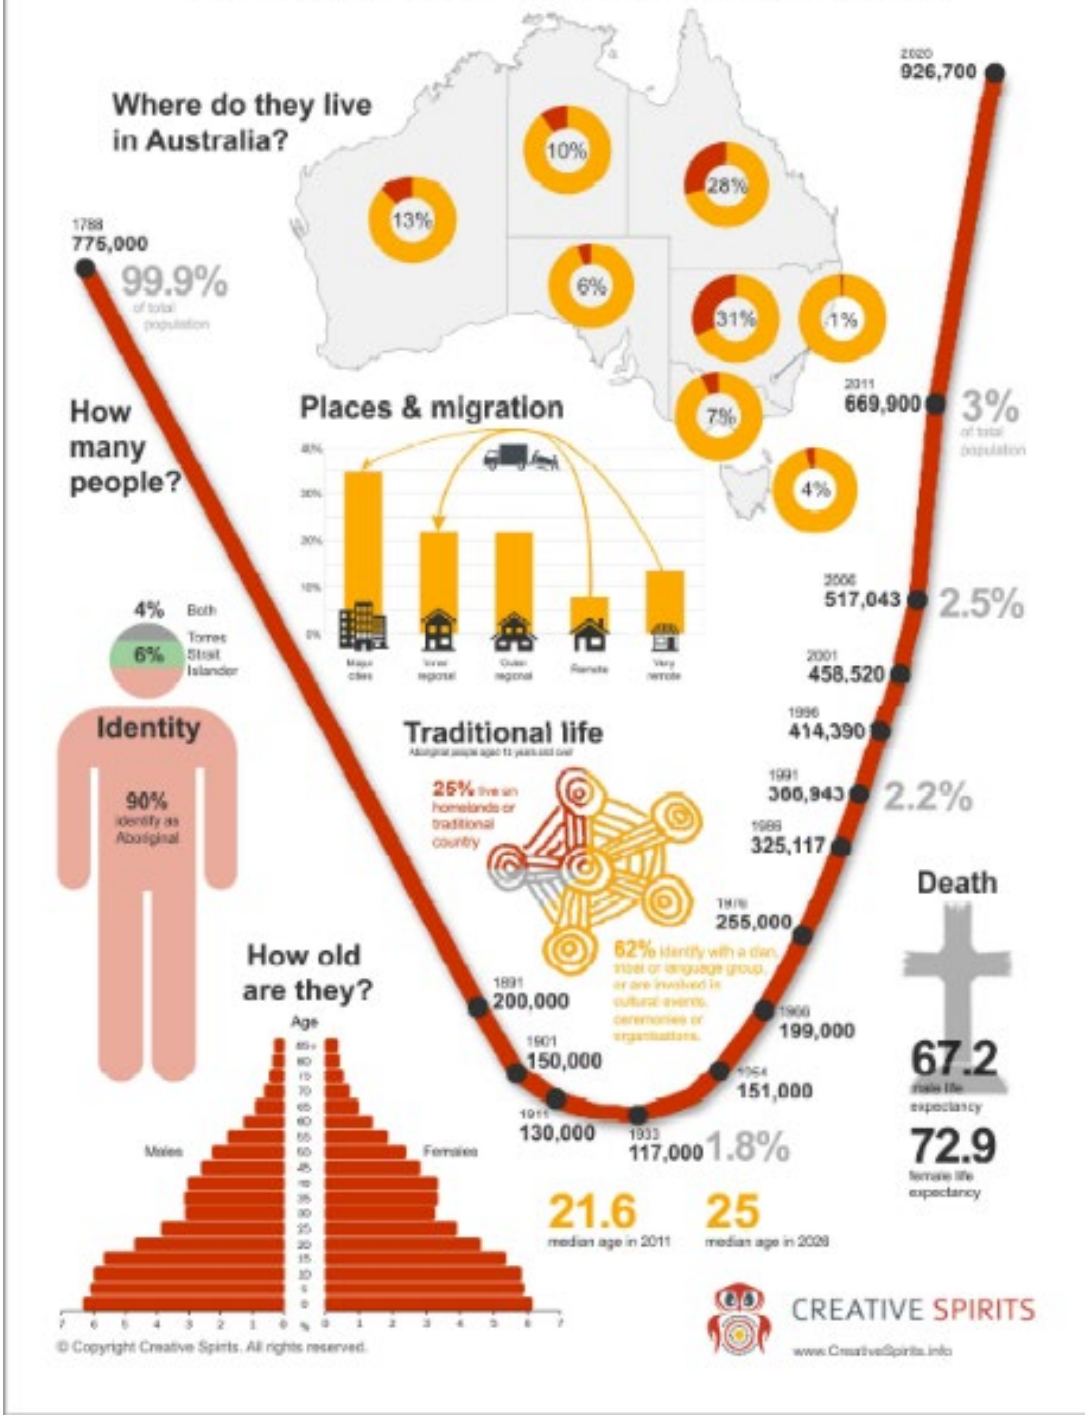

If you lack inspiration or don't know where to start, search for "Infographic" in Google, and steal the ideas you like!

Examples:

Aboriginal population in Australia

5 REASONS TO START USING
INFOGRAPHICS
IN YOUR ONLINE COURSES

1. ILLUSTRATING STATISTICS

Using infographics to illustrate complicated statistics creates a visual representation, making the data easier to analyze

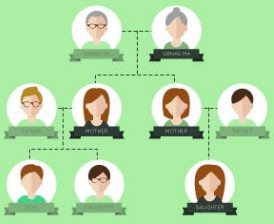

2. ELIMINATING UNNECESSARY DETAILS

If you don't have a visual aid, you're going to occupy more time and space attempting to explain something that would have been relatively easy with a graphic

3. WHEN THERE'S TOO MUCH TO WRAP YOUR HEAD AROUND

Wouldn't it be great to be able to see representations of these people with lines connecting them? That would tell the whole story without mental gymnastics

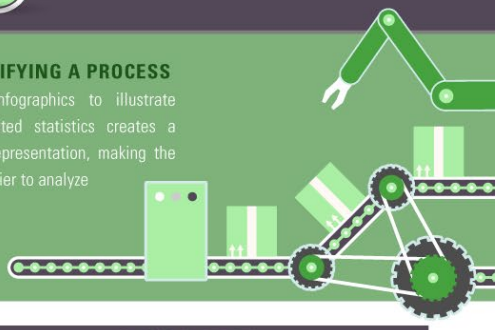

4. HELPING TWO IDEAS MEET

Infographics are one of the best tools you can provide to bridge gaps and relate concepts.

5. SIMPLIFYING A PROCESS

Using infographics to illustrate complicated statistics creates a visual representation, making the data easier to analyze
